

The author Paulo Coelho once said: “People do not need to fear the unknown if they are capable of achieving what they need and want.”

Now you too can stop worrying about fearsome surprises to your loved ones or to your employees. You can get exactly the device that is required: **GUARDIAN** from Starcom Systems.

GUARDIAN

An automatic tracking device for personal safety
with maximum independence!

GUARDIAN maximizes the personal safety of its wearers, even in dangerous surroundings. As the only personal tracking device that allows full automatic remote monitoring, it helps to free you from concern and from the need to continually check on them, while they enjoy personal independence. **GUARDIAN** allows you to specify in advance and in a simple manner various irregular situations regarding the behavior of the wearer. In this way you can feel assured when the moment of distress occurs (never, we hope!).

GUARDIAN will signal you automatically immediately, and in extreme situations it can alert the emergency services as well. It adds up to the perfect way to achieve personal safety and maximum independence!

By using GUARDIAN you gain:

🕒 The maximum safety

GUARDIAN is the only personal tracking device that allows full automatic remote monitoring. You can specify a variety of events by automatically triggering the emergency signal.

Those events are defined according to the age, character and function of the person wearing the device. For example, you can specify events such as entering or leaving a certain area at any time of day, even during the night; being absent from a certain place at a certain time (GEOFENCE); moving with unexpected speed or at an unexpected time; lack of movement of the device; and so on.

According to these definitions, the device automatically identifies situations of distress and consequently reacts.

🕒 Independence starts with freedom

GUARDIAN allows you to be relaxed and unhindered.

It releases you from nonstop worry about the person wearing the device.

All this without interfering in their privacy and independence.

🕒 Peace of mind for your day-to-day routine

GUARDIAN is the only personal tracking device that can go into action by itself automatically, even in situations of extreme lack of control when its wearer is unable, for whatever reason, to press the emergency button. When necessary, an alert is sent automatically to the local emergency service.

If required, the system can activate the voice channel without the intervention of the person who wears it.

FEEL SAFE IN ANY WAY.

⦿ Prompt and quick contact at the press of a button

GUARDIAN lets the device's wearer talk with you at any time - with one simple press of a button. A built-in speaker-phone and a list of numbers stored in memory guarantee that the contact is quick and reliable, even when the device is not being worn. If the main phone number is busy, the system can switch over to an alternate number.

⦿ Convenient and user-friendly interface

GUARDIAN includes a convenient interface allowing you, within a few simple steps, to define various alerts and to whom to send them. The alerts can be received in your mobile phone or an e-mail. Phone numbers can be added and shown as icons on the screen of the device for easy access.

⦿ Security with style

Modern and up-to-date design, the **GUARDIAN** device ensures security with style.

⦿ The expertise & experience of **STARCOM** Systems is yours

GUARDIAN is an exclusive product of Starcom Systems, a global company specializing in easy-to-use, practical personal wireless solutions that combine advanced technology, telecommunications, and digital data to protect people and businesses. As a company operating in more than 50 countries around the world and in more than 25 languages, it can provide prompt, precise tracking in every region and in any medium requested. So that you can take the equipment with you anywhere you please, worldwide Starcom Systems provides reliable, uninterrupted service, along with the assurance that the safety of the device's wearers is in the most professional of hands.

The tracking unit is part of an overall system for support and monitoring that includes hardware accompanied by an online application with a unique and friendly interface to offer a comprehensive solution.

Main Specifications

Display	LCD type Dimensions Resolution	OLED with adjustable backlight 40W x 20H (mm) 1.57W x 0.78H (inch) 132 x 64 pixels
Processor	Type	NXP(Philips) 32-bit ARM7
Power	Battery Consumption Charging method	3.75v 1,100 mAh, Lithium-ion Polymer Idle - 20 mAh __days before recharge Transmit - 200mAh_typical_days before recharge USB connection to PC, Wall charger
GPRS - Cellular Modem True Cellular Hand Set Capabilities	GSM Antenna type Network Channels Hands Free	Quad Band (850, 900, 1800, 1900). Built in (concealed) GSM, GPRS, SMS, built-in voice support. Voice, Contacts list dial, Assigned buttons, Vibration
GPS	Time to First Fix (TTFF) Positioning Accuracy Antenna type	12- 35 sec 10m CEP (50%) Built in (concealed)
Mic & Speaker	Built-In	Super high quality for voice and listen – hands free
Accelerometer	Type Purpose	4-Axis, 0.1g resolution Identify and report person's position changes
USB	Speed Port type	2.0 High Speed Mini
