

STARCOM TOOLBOX

The Toolbox application is designed to handle several tasks

The most important of these are:

Control

- ◉ Programming the unit according to the local network's parameters and the customer's requirements
- ◉ Loading the parameters and the updated version of the firmware into the units that arrived from the manufacturer
- ◉ Checking the proper functioning of the unit
- ◉ Automated testing of the unit's installation in the vehicle
- ◉ Verifying the unit's connection to the network, and checking the reception quality
- ◉ Separate testing of each output and input of the unit

Efficient operation

- ◉ A user-friendly interface for working with multiple units at the same time
- ◉ Ability to work with the units over the air
- ◉ Localization for over 7 languages
